

NANO SERUM

BY HEXIS

CERAMIC TREATMENT KIT
FOR PPF & CAR WRAPPING FILMS

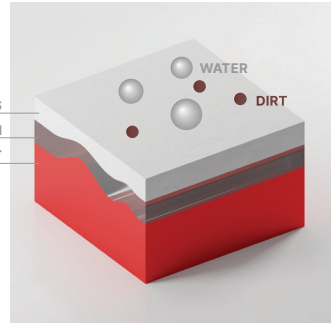

What is ceramic treatment?

Derived from nanotechnology, ceramic treatment is a vehicle bodywork protection solution that consists of applying a thin, solid layer of coating, able to absorb the daily wear and tear to which a vehicle's bodywork is exposed.

It also provides excellent hydrophobic properties to the treated surface, making it very difficult for water and dirt to adhere.

PAINT

What are the features of a ceramic treatment?

A genuine protective barrier, it helps prevent everyday damage caused by the environment.

Why choose NANO SERUM by HEXIS?

It is the high-end solution for protecting and maintaining the visual appearance and the capital value of a vehicle or a wrap for the long term.

- * Clean vehicle, less frequent trips to the car wash
- * Easy to clean
- * Shine and gloss of bodywork and wrap are preserved
- * Long-term fading and deterioration are minimised

A complete kit for a precise high-performance application

- 1 50ml container
- 1 instruction leaflet
- 1 application pad
- 5 suede pads
- 2 nitrile gloves

Technical specifications:

- * Clear ceramic high-performance coating
- * 100% compatible with all clear BODYFENCE and HEXIS wrapping films
- * Reach Compliant
- * Permanent protection for 24 to 36 months
- * Resistant to up to 100 washes
- * Guaranteed slip effect

Proven slip performance*

- 1 Paint alone
↳ adhesion 10
- 2 Paint + BODYFENCE Film
↳ adhesion 3,5
- 3 Paint + BODYFENCE Film + NANO SERUM by HEXIS
↳ adhesion 1

**Trial carried out by the HEXIS research laboratory*

The HEXIS + The application of Nano serum by Hexis requires attention and precision. It is strongly recommended to use it in an environment sheltered from dust and rain to avoid the deposit of dirt on the bodywork. Good lighting (except direct sunlight) provides a comfortable application environment and minimises the risk of streaks.
